Advanced Analysis:

Please help me forecast the sales of different categories and models of BMW in 2011.

Forecasting:

Python code:

```python
from prophet import Prophet

df = table[(table["Brand"] == "BMW")]
category_yearly_sales = df.groupby(["Category","Year"])["Sales
...

for category, category_df in catrgory_dfs.items():
    model = Prophet()
    model.fit(category_df)
    future = model.make_future_dataframe(periods=1, freq='Y')
    forecast = model.predict(future)
...
```

Result:

```json
{
  "Compact":[{"Year": "2011", "Sales": 94371}],
  "Fullsize":[{"Year": "2011", "Sales": 12253}],
  "Midsize":[{"Year": "2011", "Sales": 51491}],
  "SUV":[{"Year": "2011", "Sales": 74532}],
  "Sporty":[{"Year": "2011", "Sales": 7382}],
  "Subcompact":[{"Year": "2011", "Sales": 8832}]
}
```

Basic Insights:

Does BMW have noticeably higher Sales?
